# Laundry Washer & Dryer: Measurement Cheat Sheet

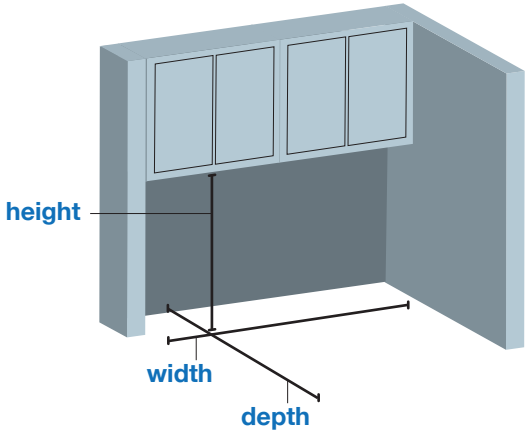
Use this as a guide to make sure the appliance you want fits in the space you have available.

## 1 Measure the narrowest doorway or hallway from outside the home to the location where the appliance will be installed.

**Width of narrowest hallway / doorway in inches:** _____ **inches**

- Appliance depth OR width must be smaller than the width above.
- Some home doors can be removed if necessary.

## 2 Measure the opening where the appliance(s) will go. Take door, floor and wall mouldings into consideration.



**width** _____ **inches**

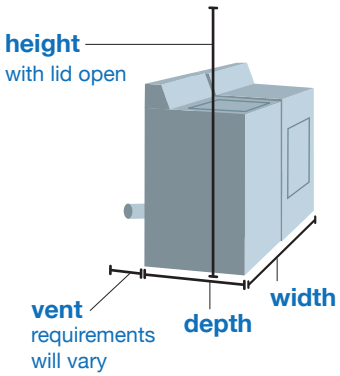
**depth** _____ **inches**

**height** _____ **inches**

**36 Depth x 60 Width provides clearance for most washer dryer sets.**

## 3 Verify the appliances you're considering to fit within the measurements you took in step 2.

- Because of venting, the dryer is typically the constraining factor of depth. Verify vent space requirements for each appliance you re considering.
- Allow 1" on all sides to reduce noise.



| | brand | model | width | depth | height | vent |
|---|---|---|---|---|---|---|
| Washers | | | | | | |
